Academic program description form for colleges and institutes

University: Al-Furat Al-Awsat Technical University

College/ Institute Technical Institute Samawa

Scientific Department : Mechanical Technologies.

Date of filling out the file 20/3/2024

The signature : 

Name of Department Head: M.M Mujahed Kareem Oglah

Date: 20/3/2024

The signature : 

Name of scientific assistant:- M. Alaa Abd Ali Hadi

Date: 20/3/2024

The file was checked by M. M. Ahmed Abdel Mohsen Abdel Sahib

Division of Quality Assurance and University Performance

Name of the Director of the Quality Assurance and University Performance

Division: Ahmed Abdel Mohsen

Date: Signing 20/03/2024

Authentication of the Dean

1. See the program

to remember Vision of the program as stated in the university's bulletin and website.

The Mechanics Department is one of the main technological departments. The department is moving towards expanding the base of technical education and its modern applications to be a leader in providing accredited technical services. The spirit of competition and cooperation with the complex..

2. Program message

to remember The program's mission is as stated in the university's bulletin and website.

The Department of Mechanics adopts a general message based in its general form on the framework of technical education in Iraq, a message that it seeks to achieve every year to highlight the distinction of the department. The general objectives are focused on graduating national technical cadres at a level of education and training capable of absorbing technology systems and supporting the process of technical development to keep pace with rapid global technical developments..

The private message includes the following:-

- 1- Using computer and Internet technologies in education and training.
- 2- Activating the relationship with the private sector in the areas of training.
- 3- Follow up on the development of training plan curricula and then update laboratories and workshops.
- 4- Interaction with the labor market and community needs for qualification and training.

3. Program Goals

The Department of Mechanical Technologies/Production Branch aims to prepare technical staff specialized in the field of mechanical production techniques, who will be the link between the specialist and the skilled worker. The department

prepares and prepares the graduate and provides him with theoretical, applied and practical information to be able to carry out the tasks assigned to him.

4. Program accreditation

No YugDr

5. Other external influences

Summer training for first-year students, and many service departments and institutions receive graduates of the department, as the level of work is taken along the lines of the school curriculum.

6. Program structure

comments *	percentage	Study unit	Number of courses	Program structure
Nothing	31.66	60	19	Enterprise requirements
Nothing	---	---	---	College requirements
Nothing	31.66	60	19	Department requirements
Nothing	---	Nothing	There is	summer training
Nothing	0	0	0	Other

* Notes may include whether the course is core or elective.

Conclusion	
65	Number of hours/week for both stages
130	Number of units for the two stages

37%	Ratio of theoretical hours for the two stages
63%	The ratio of practical hours for the two stages
62%	Percentage of hours for specialized lessons for the two stages
32%	Percentage of hours for auxiliary lessons for the two stages
6%	Percentage of hours for general lessons for the two stages
270	Number of summer training hours
2220	The total number of hours plus summer training for the two stages

-	1	English	There is no code	

8. Expected learning outcomes of the programme	
Knowledge	
<p>A1-The student is introduced to the basic concepts of the operation of various metal cutting machines (lathe, milling machine, and many specialized machines in workshops).</p> <p>A2-The student practices and applies the foundations and concepts he has studied theoretically</p> <p>A3-The student learns about the design of laboratories and factories and how to arrange machines in workshops and lines</p> <p>Productivity</p> <p>A4-The student learns about performing periodic and emergency maintenance on machines to avoid work risks</p>	<p>i- Cognitive objectives</p>

Skills	
<p>B1- Providing the student with applied skills for production machines (lathing, milling, milling...)</p> <p>B2- Knowing the types of problems in production workshops and developing the optimal solution to them in the work environment</p> <p>B3- The student gains the skill of managing production workshops</p> <p>B4–Giving the student the spirit of taking care of the machine and cooperating with his colleagues to achieve the best production goals</p>	<p>B -Marathi goals Forprogram</p>
Value	
<p>C1-The student's ability to think systematically and thus to make the right decision</p> <p>C2-Urging students to collect information that increases their knowledge of the specialty</p> <p>C3-Urging the student to know how to maintain his life within the work environment</p> <p>C4- Urging the student to acquire individual skills in the work environment</p> <p>C5- Implementing small practical and applied projects</p>	<p>C- Emotional and value goals.</p>

9. Teaching and learning strategies

Teaching and learning strategies and methods adopted in implementing the program in general.

- 1- Preparing and implementing research and projects by students within the department's curricula and presenting them at annual student conferences
- 2- Using modern technical engineering techniques and skills

- 3- Using modern teaching methods such as brainstorming and discussion within the classroom. Students' cooperation in solving students' scientific and theoretical problems and solving questions.
- 4- Preparing reports and using the Internet to collect information sources.

10. Evaluation methods

Implementing it in all stages of the program in general.

Evaluation methods

- 1. Discussing research
- 2. Written tests
- 3. Direct feedback
- 4. Surprising questions
- 5. Various reports
- 6. Semester and final exams

11. education institution

Faculty members

Preparing the teaching staff		Special requirements/skills (if any)	Specialization		Scientific rank
lecturer	angel		private	general	
0	5	Nothing	Thermal energy engineering	Master's Mechanical Engineering	M. M. Mujahid Karim Okla
			Refractories	Ph.D Mechanical Engineering	Dr. Ahmed Razzaq Hassan

		Nothing	Applied mechanics	Master's Mechanical Engineering	M. M. Ahmed Abdel Mohsen Abdel Sahib
			Industrial engineering	Master's Mechanical Engineering	M. M. Ali Jodi Jassim
		Nothing	Mechanical	Master's Mechanbec	M. M. Ali Abdel Azim Hilal

Professional development

Orienting new faculty members

Briefly describes the process used to orient new, visiting, full-time, and part-time faculty at the institution and department levels

Involving technicians from the teaching staff in development training courses for the latest developments in their specializations and participating in courses inside and outside Iraq.

Professional development for faculty members

Briefly describe the academic and professional development plan and arrangements for faculty members such as teaching and learning strategies, assessment of learning outcomes, professional development, etc.

Involving faculty members in developmental teaching courses to update the latest developments in their specializations and participating in courses inside and outside Iraq.

12. Acceptance standard

(Developing regulations related to admission to the college or institute, whether central admission or others mentioned)

- 1- Graduate of preparatory school, scientific branch
- 2- Graduate of vocational/industry study
- 3- Admission is for both genders (males and females)

The minimum acceptance rate is determined by the authorities represented by the Central Admissions Department in the Ministry of Higher Education and Scientific Research.

13. The most important sources of information about the program

- **Scientific books and documents related to the program, as well as through reviewing the latest scientific equipment and films**
- **Institute website and department email.**

14. Program development plan

The Mechanical Technologies Department / Production Branch always seeks to prepare and graduate distinguished technical cadres in the field of specialization to serve their country in their sectors and provide everything that is distinctive and new by adopting modern technologies and participating in building and developing the country's infrastructure. By adding modern laboratories and testing equipment that cover the needs of the course and conducting research, as well as updating curricula that are consistent with recent changes in the field of specialization.

10. Course structure

Evaluation method	Learning method	Name of the unit or topic	Required learning outcomes	hours	the week
Discussion, quick quiz, solve problems, Homework	a lecture theoretical+practical	Definition of measurement and units of measurement, error and its causes, methods of measuring main dimensions, simple conveyor measuring devices.	The student's understanding of the material	2n+2A	1
Discussion, quick quiz, solve problems, Homework	a lecture theoretical+practical	Measuring feet (probes), their parts, uses, and types.	The student's understanding of the material	2n+2A	2

Discussion, quick quiz, solve problems, Homework	a lecture theoretical+practical	Micrometers, their types, uses, parts, and the idea of how a micrometer works.	The student's understanding of the material	2n+3A	3
Discussion, quick quiz, solve problems, Homework	a lecture theoretical+practical	Measuring molds and their uses, types, and how to use them.	The student's understanding of the material	2n+3A	4
Discussion, quick quiz, solve problems, Homework	a lecture theoretical+practical	Measuring angles and side shapes, tools for measuring angles and measuring cups (dabaa) and their types.	The student's understanding of the material	2n+3A	5
Discussion, quick quiz, solve problems, Homework	a lecture theoretical+practical	Vocabulary details	The student's understanding of the material	2n+3A	6
Discussion, quick quiz, solve problems, Homework	a lecture theoretical+practical	Method of measuring screw elements, external and internal diameters, measuring step and	The student's understanding of the material	2n+3A	7

		step diameter, electronic mechanical comparison devices.			
Discussion, quick quiz, solve problems, Homework	a lecture theoretical+practical	Optical device, some modern measurement methods (acoustic frequency measuring devices, digital optical).	The student's understanding of the material	2n+3A	8
Discussion, quick quiz, solve problems, Homework	a lecture theoretical+practical	Files and their role in industrial development, the chipping process, the tools used and the processes involved in the filing process, the files used and their specifications, the machines and their types and methods of attaching	The student's understanding of the material	2n+3A	9

		crafts to them, the uses of files, the method of cleaning files.			
Discussion, quick quiz, solve problems, Homework	a lecture theoretical+practical	Cutting with a saw, the conditions that must be met in the sawing process, the saw weapon, the crowns and their types, the teeth, the method of sharpening and maintaining them, the types of manual hammer heads and the method of installing them.	The student's understanding of the material	2n+3A	10
Discussion, quick quiz, solve problems, Homework	a lecture theoretical+practical	Drilling and grinding, types of drills, types of primers, types of primers, how to	The student's understanding of the material	2n+3A	11

		perform the drilling and grinding process.			
Discussion, quick quiz, solve problems, Homework	a lecturetheoretical+practical	Models, their types, wood used in their manufacture, and the conditions that must be met in the model.	The student's understanding of the material	2n+3A	12
Discussion, quick quiz, solve problems, Homework	a lecturetheoretical+practical	Tools and devices used in making the model, box molds, and how to design a simple model.	The student's understanding of the material	2n+3A	13
Discussion, quick quiz, solve problems, Homework	a lecturetheoretical+practical	Plumbing, historical overview, main methods of plumbing (cast casting, sand casting, metal mold casting, other methods of plumbing) Advantages	The student's understanding of the material	2n+3A	14

		of the plumbing process.			
Discussion, quick quiz, solve problems, Homework	a lecturetheoretical+practical	Plumbing sand, plumbing sand specifications, components, plumbing sand, devices used and additives to plumbing sand.	The student's understanding of the material	2n+3A	15
Discussion, quick quiz, solve problems, Homework	a lecturetheoretical+practical	Dumps and tools used in preparing sand molds, the process of molding a simple model and the last bench, the parasitic molds and the model molds used	The student's understanding of the material	2n+3A	16
Discussion, quick quiz, solve problems, Homework	a lecturetheoretical+practical	Pulp, its types, pulp sand, mixture ratios and materials added to it, stages of its work	The student's understanding of the material	2n+3A	17

		(mixing and preparing sand, making balls, drying it), the benefit of the drying process, ovens or methods of drying balls and their equipment.			
Discussion, quick quiz, solve problems, Homework	a lecture theoretical+practical	Casting with metal molds, its types, centrifugal casting, and its types.	The student's understanding of the material	2n+3A	18
Discussion, quick quiz, solve problems, Homework	a lecture theoretical+practical	Metal smelting and its foundations, types of smelting furnaces, blast furnace, main dimensions and method of operation, blast furnace, electric arc furnace,	The student's understanding of the material	2n+3A	19

		reflector furnace, rotary furnace.			
Discussion, quick quiz, solve problems, Homework	a lecture theoretical+practical	Casting of castings, its equipment and foundations, cleaning of castings, casting defects, inspection of castings.	The student's understanding of the material	2n+3A	20
Discussion, quick quiz, solve problems, Homework	a lecture theoretical+practical	Welding, foundations of metal welding, clarification of the main methods of welding (pressure welding, electric arc fusion welding, other methods of fusion welding, flash welding and caustic welding), types of welding joints.	The student's understanding of the material	2n+3A	21

<p>Discussion, quick quiz, solve problems, Homework</p>	<p>a lecture theoretical+practical</p>	<p>Hot pressure welding, including (electrical resistance welding, including spot and line welding, flash welding), cold pressure welding, pressure welding using explosives, and pressure welding using ultrasonic waves.</p>	<p>The student's understanding of the material</p>	<p>2n+3A</p>	<p>22</p>
<p>Discussion, quick quiz, solve problems, Homework</p>	<p>a lecture theoretical+practical</p>	<p>Fusion welding and gas welding, oxy-hydrogen welding and oxy-acetylene welding, types of flame, right-hand welding and left-hand</p>	<p>The student's understanding of the material</p>	<p>2n+3A</p>	<p>23</p>

		welding, cutting with oxy-acetylene.			
Discussion, quick quiz, solve problems, Homework	a lecture theoretical + practical	Arc welding, welding current, direct and reverse polarity method, types of electrodes, packaging of metal electrodes and their types.	The student's understanding of the material	2n+3A	24
Discussion, quick quiz, solve problems, Homework	a lecture theoretical + practical	Electrode movement, methods of isolating electrodes and the welding area, electric arc welding using protective gases (carbon dioxide welding, argon tig welding, brazing welding)	The student's understanding of the material	2n+3A	25

Discussion, quick quiz, solve problems, Homework	a lecture theoretical+practical	Atomic hydrogen arc welding, arc welding, fusion welding.	The student's understanding of the material	2n+3A	26
Discussion, quick quiz, solve problems, Homework	a lecture theoretical+practical	Temperature welding, caustic welding (mortar welding, plumbing welding) and some modern types of welding (laser welding, electron beam welding).	The student's understanding of the material	2n+3A	27
Discussion, quick quiz, solve problems, Homework	a lecture theoretical+practical	Welding defects, welding tests.	The student's understanding of the material	2n+3A	28
Discussion, quick quiz, solve problems, Homework	a lecture theoretical+practical	Metal forming, the theory of forming, the foundations of cold and hot forging, blacksmithing, the foundations of	The student's understanding of the material	2n+3A	29

		blacksmithing and its methods (manual, mechanical), blacksmithing equipment, manual and mechanical, blacksmithing elements.			
11. Course evaluation					
<ol style="list-style-type: none"> 1. Daily oral and written exams 2. ExamsFSolid and final. 3. Marks for participation, questions and discussion of theoretical and practical study topics During the course of lectures. 4. Grades for homework. 5. Degrees for writing reports and conducting scientific research in the context of scientific subject vocabulary 					
12. Learning and teaching resources					
Engineering mechanics			Required textbooks (methodology, if any)		
The institute's library for additional curricular resources					
1- Introduction to production engineering Written by – Hassan Hussein Fahmy, Jalal Shawqi (1966) 2- Principles of metal casting Translation – Dr. Salah al-Din Muhammad al-Muhanni 3- Metal forming methods Written by - Dr. Anwar Abdel Wahed (1963). 4- Manufacturing methods Written by - Dr. Arif Abu Safia, Dr. Abdul Razzaq Ismail Khadr			Main references (sources)		

<p>5- Ignition of metals – technological foundations</p> <p>Written by: Abdel Moneim Akef (1977).</p> <p>6- Principles of milling operations</p> <p>Written by – Afrutin, translated by – Muhammad Ab Hamid Al-Rifai</p>

Evaluation method	Learning method	Name of the unit or topic	Required learning outcomes	hours	the week
Theoretical and practical exams	Lecture, computer, projector	The importance of engineering drawing	The importance of engineering drawing, the importance of using a computer to implement Engineering	3	the first

			ng drawing, standard drawing board sizes, an overview of the AutoCAD program		
Theoretical and practical exams	Lecture, computer, projector	Using the computer in drawing	Getting ready to draw using Title Blockthe computer	3	the second
Theoretical and practical exams	Lecture, computer, projector	Drawing geometric shapes	Drawing geometric shapes Using computer	3	the third
		Fee adjustments	Graphic modifications, computer drawing aids	6	the fourth And the fifth
Theoretical and practical exams	Lecture, computer, projector	Types of lines for engineering drawing	Types of lines for engineering drawing, engineering operations, dimensional development	9	Sixth, seventh and eighth
Theoretical and practical exams	Lecture, computer, projector	Perspective drawing	Perspective drawing, a perspective drawing containing a circle represented by an ellipse	3	Ninth
Theoretical and practical	Lecture, computer	Projection theory	Projection theory, drawing	6	The tenth and eleventh

al exams	r, projector		Simplified projections.		
Theoretical and practical exams	Lecture, computer, projector	Principal projections and even angles	Principal plots, even angles, drawing according to The theory of the first even angle of projection, drawing according to the theory of the third even angle of projection	12	The twelfth and thirteenth The fourteenth and fifteenth
Theoretical and practical exams	Lecture, computer, projector	Draw the three main projections	Draw the three main projections with even angles and note the difference between them	6	sixteen And the seventeenth
Theoretical and practical exams	Lecture, computer, projector	Conclusion of the third project from the two projects	Conclusion of the third project from the two projects	6	Eighteenth and nineteenth
Theoretical and practical exams	Lecture, computer, projector	Infer perspective from Two or three drops	Inferring perspective from two or three projections.	6	Twenty and twenty-first

Theoretical and practical exams	Lecture, computer, projector	Cutting theory	Cutting theory, shapes And cutting lines by type Material, plotted sections	6	Twenty-second and twenty-third
Theoretical and practical exams	Lecture, computer, projector	Drawing clipped projections	Draw projections cut from One specific hometown	6	the fourth The twenty-fifth
Theoretical and practical exams	Lecture, computer, projector	Partially cropped projection drawing	Partially cropped projection drawing	6	Twenty-sixth and twenty-seventh
Theoretical and practical exams	Lecture, computer, projector	Drawing a half-cut muscat,	Drawing a half-cut projection, drawing winding sections.	9	VIII And the ninth And the twentyAnd the thirty
11. Course evaluation					
<p>1- Daily exams provide a comprehensive exercise for the lesson topic, which requires thinking and the skill of using a computer to solve</p> <p>2- Degrees for participating in solving competitive questions Grades for homework</p>					
12. Learning and teaching resources					
Industrial drawing by Mr. Youssef Al-Radi			Required textbooks (methodology, if any)		
<u>Arabic sources</u>			Main references (sources)

6. Number of study hours (total)/number of units (total)					
60 hours					
7. Name of the course administrator(If more than one name is mentioned)					
Name: Khalil Fadel Abdel Khader Email:					
8. Course objectives					
Identify metallic and non-metallic engineering materials.				Objectives of the subject	
9. Teaching and learning strategies					
1- lecture 2- Data showdata show Material-specific testing devices, such as tension and compression devices hardness and durability testing devices				The strategy	
10. Course structure					
Evaluation method	Learning method	Name of the unit or topic	Required learning outcomes	hours	the week
Theoretical and practical exams	lecture , Blackboard, projector	Definition of engineering materials	Learn to classify engineering materials and their various properties	2	the first
Theoretical and practical exams	lecture , Blackboard, projector	Atom, element, types of bonds, engineering materials.	Review of firsts Engineering materials	2	the second
Theoretical and practical exams	lecture , Blackboard, projector	Crystalline materials And amorphous.	Learn to classify materials in terms of crystal structure	2	the third
Theoretical and	lecture , Blackboard, projector	Crystal shapes	Learn the types of crystal shapes	2	the fourth

practical exams			and know their properties		
Theoretical and practical exams	lecture , Blackboard, projector	Mechanical properties of materials (stress, strain). , stress-strain curve, ductility, collapse. (Know some characteristics Mechanical materials	2	Fifth
Theoretical and practical exams	lecture , Blackboard, projector	Hardness, hardness tester.	Learn hardness testing methods	4	Sixth and seventh
Theoretical and practical exams	lecture , Blackboard, projector	Durability, durability tests.	Learn durability testing methods	2	VIII
Theoretical and practical exams	lecture , Blackboard, projector	Thermal properties of materials (Thermal expansion, thermal conductivity)	Learn how to act Exhaust valve on the drawing board	2	Ninth
Theoretical and practical exams	lecture , Blackboard, projector	Electrical properties of materials (ionic materials, insulating materials, materials Metallurgy, factors affecting conductivity. (Knowledge of properties Electrical materials	2	The tenth
Theoretical and practical exams	lecture , Blackboard, projector	Magnetic properties of materials) Materials Ferromagnetism, paramagnetic materials, diamagnetic materials, magnetic hysteresis, factors affecting magnetism (Knowledge of properties Mechanical materials	2	eleventh
Theoretical and practical exams	lecture , Blackboard, projector	Chemical properties For materials) corrosion, smoothness electrochemical, oxidation (Knowledge of properties Chemical materials	2	twelveth
Theoretical and practical exams	lecture , Blackboard, projector	Iron, its most important ores, extraction, blast furnace , transformers.	Learn how Extracting iron and knowing its most important ores	2	Thirteenth
Theoretical and practical exams	lecture ,	Carbon steel, its most important	Know the most important types	2	fourteenth

	Blackboard, projector	types, properties, and uses.	Carbon steel and its uses		
Theoretical and practical exams	lecture , Blackboard, projector	Alloy steel, its most important types, properties, and uses.	Knowing the most important types of alloy steel and their uses	2	Fifteenth
Theoretical and practical exams	lecture , Blackboard, projector	Cast iron, its most important types, properties, and uses.	Knowing the most important types of cast iron and their uses	4	Sixteenth and seventeenth
Theoretical and practical exams	lecture , Blackboard device the offer	Copper, its alloys, properties, uses,	Metal identification Copper, the most important alloy and its properties And its uses	2	eighteen
Theoretical and practical exams	lecture , Blackboard, projector	Aluminum, its alloys, properties, and uses.	Identifying aluminum is the most important metal Alloys, their properties and uses	2	nineteenth
Theoretical and practical exams	lecture , Blackboard, projector	Nickel, its alloys, properties , its uses.	Identify nickel metal, its most important alloys and its properties And its uses	2	The twentieth
Theoretical and practical exams	lecture , Blackboard, projector	Tin, zinc, manganese, alloys, properties, uses	Identify the metal tin, the most important alloys, its properties and uses	2	21st
Theoretical and practical exams	lecture , Blackboard, projector	Other nonferrous alloys:)White metals and bearing alloys. (Identify white metals and bearing alloys	2	the second And the twenty
Theoretical and practical exams	lecture , Blackboard, projector	Powder metallurgy (Methods of obtaining mineral powders).	Introduction to powder metallurgy	2	the third And the twenty
Theoretical and practical exams	lecture , Blackboard, projector	Powder pressing, sintering process.	Learn about powder pressing and sintering process	2	twenty fourth
Theoretical and practical exams	lecture , Blackboard, projector	Ceramic materials	Knowledge of ceramic materials	2	25th

Theoretical and practical exams	lecture , Blackboard, projector	Glass, its types, manufacture, and uses.	Learn the types of glass and how to make and use it	2	twenty-sixth
Theoretical and practical exams	lecture , Blackboard, projector	Concrete, its industrial uses.	Learn about concrete and its uses	2	27th
Theoretical and practical exams	lecture , Blackboard, projector	Polymers, polymer molecules, types of polymerization.	Knowledge of polymers And types of polymerization	2	VIII And the twenty
Theoretical and practical exams	lecture , Blackboard, projector	Properties and uses of plastics.	Learn the properties of plastics and their uses	4	Ninth Twenty and thirty
11. Course evaluation					
<p>1- Theoretical tests (semester, final and daily exams)</p> <p>2- Practical tests</p> <p>3- Questions during the lecture</p>					
12. Learning and teaching resources					
Properties of materials. Maan Yahya Al-Hamdani, Hashem Kadhim Al-Jawahiri			Required textbooks (methodology, if any)		
<p>1- Principles of metallurgy and materials engineering. F. Billy, translation - Dr. Hussein Baqir, may God have mercy on him</p> <p>2- Engineering metallurgy (applied physical metallurgy) A. Hickens, translation - George Yacoub, Reda Muhammad Ali</p> <p>3- Metals, their structure, properties and thermal coefficients. D.J. Diferol , a. Uliman - Translation - Dr. Jaafar Taher Al-Haidari. Adnan Nehme</p> <p>4- Properties of engineering materials. Dr.. Sabah Amin Karakji, Dr. Walid Muhammad Saleh, Dr. Talib Hussein Al-Sharif</p> <p>5- Engineering materials and their tests. Dr.. Qahtan Khalaf Al-Khazraji, Adel Mahmoud Hussein, Abdel-Jawad Muhammad Sharif</p>			Main references (sources)		

6- Mineral physics. Dr. Abdul Razzaq Ismail Khudair

Name: Email:	
8. Course objectives	
<p>-The student should be able to recognize the principles and values of human rights, introduce them, and educate generations to respect and adhere to them</p> <p>2-Learn about public freedoms and what these freedoms are in their details.</p> <p>3-The student learns about continuous awareness of human rights and the fundamental freedoms associated with them.</p> <p>4-He fights everything that aims to ignore it, harm it, or undermine its sanctity</p> <p>5-Learn about the concept of democracy and its relationship to public freedoms.</p>	<p>Objectives of study subject</p>
9. Teaching and learning strategies	
<p>1- Explanation and clarification</p> <p>2- Use of current display devices</p> <p>3-Lecture route</p>	<p>The strategy</p>
10. Course structure	

Evaluation method	Learning method	Name of the unit or topic	Required learning outcomes	hours	the week
Oral exams, written exams, and semester exams ,Final exams,Evaluation Daily	lecture	Human rights – their definition – their goals Human rights in ancient civilizations, especially the Mesopotamian civilization	The student learns about human rights	2 hours of sunshine per week	1
Oral exams, written exams, and semester exams ,Final exams,Evaluation Daily	lecture	Human rights in divine laws, with a focus on human rights in Islam	The student learns about human rights	2 hours of sunshine per week	2
Oral exams, written exams, and semester exams ,Final exams,Evaluation Daily	lecture	Human rights in contemporary and modern history – international recognition of human rights since World War I and the League/United Nations	The student learns about human rights	2 hours of sunshine per week	3
Oral exams, written exams, and semester exams ,Final exams,Evaluation Daily	lecture	Regional recognition of human rights, European Convention on Human Rights0591American agreement 1	The student learns about human rights	2 hours of sunshine per week	4
Oral exams, written exams,	lecture	Non-governmental organizations and human rights)	The student learns about human rights	2 hours of	5

and semester exams ,Final exams,Evaluation Daily		International Committee of the Red Cross – Amnesty International – Human Rights Watch – National Human Rights Organizations ¹		sunshine per week	
Oral exams, written exams, and semester exams ,Final exams,Evaluation Daily	lecture	Human rights in Iraqi constitutions between theory and reality ¹	The student learns about human rights	2 hours of sunshine per week	6
Oral exams, written exams, and semester exams ,Final exams,Evaluation Daily	lecture	The relationship between human rights and civil freedoms: 0–In the Universal Declaration of Human Rights ¹ 2–In regional charters and national constitutions 1	The student learns about human rights	2 hours of sunshine per week	7
Oral exams, written exams, and semester exams ,Final exams,Evaluation Daily	lecture	Economic, social and cultural human rights and civil and political human rights ¹	The student learns about human rights	2 hours of sunshine per week	8
Oral exams, written exams, and semester exams ,Final exams,Evaluation Daily	lecture	Modern human rights: facts in development – the right to a clean environment – the right to solidarity – the right to religion	The student learns about human rights	2 hours of sunshine per week	9

<p>Oral exams, written exams, and semester exams ,Final exams,Evaluation Daily</p>	<p>lecture</p>	<p>Guarantees of respect and protection of human rights at the national level – guarantees in the constitution and laws – guarantees in the principle of the rule of law</p> <p>Guarantees in constitutional oversight – guarantees in Freedom of the press and public opinion – the role of non-governmental organizations in respecting and protecting human rights1</p>	<p>The student learns about human rights</p>	<p>2 hours of sunshine per week</p>	<p>10</p>
<p>Oral exams, written exams, and semester exams ,Final exams,Evaluation Daily</p>	<p>lecture</p>	<p>Guarantees, respect and protection of human rights at the international level:</p> <ul style="list-style-type: none"> - The role of the United Nations and its specialized agencies in providing guarantees - The role of regional organizations (the Arab League – the European Union – the European African – Organization of American States – ASEAN1 	<p>The student learns about human rights</p>	<p>2 hours of sunshine per week</p>	<p>11</p>

		-The role of international, regional non-governmental organizations and public opinion in respecting and protecting human rights			
Oral exams, written exams, and semester exams ,Final exams,Evaluation Daily	lecture	The general theory of freedoms: the origin of rights and freedoms – The project’s position on the declared rights and freedoms – Use of the term public freedoms1	The student learns about human rights	2 hours of sunshine per week	12
Oral exams, written exams, and semester exams ,Final exams,Evaluation Daily	lecture	The legal rule of the state of law	The student learns about human rights	2 hours of sunshine per week	13
Oral exams, written exams, and semester exams ,Final exams,Evaluation Daily	lecture	Regulation of public freedoms by public authorities	The student learns about human rights	2 hours of sunshine per week	14
Oral exams, written exams, and semester exams ,Final exams,Evaluation on	lecture	Equality: The historical development of the concept of equality The modern development of the idea of equality - gender equality1	The student learns about human rights	2 hours of sunshine per week	15

Daily		- Equality between individuals according to their beliefs And their element1			
Oral exams, written exams, and semester exams ,Final exams,Evaluation Daily	lecture	Democracy. Its definition. Its types	The student learns about human rights	2 hours of sunshine per week	16
Oral exams, written exams, and semester exams ,Final exams,Evaluation Daily	lecture	Concepts of democracy	The student learns about human rights	2 hours of sunshine per week	17
Oral exams, written exams, and semester exams ,Final exams,Evaluation Daily	lecture	Democracy in the Third World	The student learns about human rights	2 hours of sunshine per week	18
Oral exams, written exams, and semester exams ,Final exams,Evaluation Daily	lecture	Democratic systems in the world	The student learns about human rights	2 hours of sunshine per week	19
Oral exams, written exams, and semester exams	lecture	The concept of freedoms, classification of public freedoms	The student learns about human rights	2 hours of sunshine	20

,Final exams,Evaluation Daily				e per week	
Oral exams, written exams, and semester exams ,Final exams,Evaluation Daily	lecture	Fundamental freedoms, intellectual freedoms, economic and social freedoms	The student learns about human rights	2 hours of sunshine per week	21
Oral exams, written exams, and semester exams ,Final exams,Evaluation Daily	lecture	Freedom of security and feeling of reassurance, freedom of coming and going	The student learns about human rights	2 hours of sunshine per week	22
Oral exams, written exams, and semester exams ,Final exams,Evaluation Daily	lecture	Freedom of education	The student learns about human rights	2 hours of sunshine per week	23
Oral exams, written exams, and semester exams ,Final exams,Evaluation Daily	lecture	Freedom of the press Freedom of assembly	The student learns about human rights	2 hours of sunshine per week	24
Oral exams, written exams, and semester exams	lecture	Freedo m of associa tion	The student learns about human rights	2 hours of sunshine	25

,Final exams,Evaluation Daily		freedom in the job		e per week	
Oral exams, written exams, and semester exams ,Final exams,Evaluation Daily	lecture	The right to own property	The student learns about human rights	2 hours of sunshine per week	26
Oral exams, written exams, and semester exams ,Final exams,Evaluation Daily	lecture	Freedom of trade and industry	The student learns about human rights	2 hours of sunshine per week	27
Oral exams, written exams, and semester exams ,Final exams,Evaluation Daily	lecture	women freedom	The student learns about human rights	2 hours of sunshine per week	28
Oral exams, written exams, and semester exams ,Final exams,Evaluation Daily	lecture	Political parties and public freedoms	The student learns about human rights	2 hours of sunshine per week	29
Oral exams, written exams, and semester exams	lecture	Scientific and technical progress and public freedoms	The student learns about human rights	2 hours of sunshine	30

,Final exams,Evaluation on Daily				e per week	
11. Course evaluation					
1 Daily oral and written exams 2 Pray exams and final 3 Grades for the participant, questions, and discussion of topics related to the topics 4 Grades for homework

Objective of the course: Acquiring the manual skill to carry out operating and manufacturing operations using various hand tools and measuring tools and the ability to work and operate operating machines in the optimal production method.					Objectives of the subject
9. Teaching and learning strategies					
1. Explanation and clarification 2. Display models and illustrations 3. Lecture route 4. Use Devices and tools Available in the workshops					The strategy
10. Course structure					
Evaluation method	Learning method	Name of the unit or topic	Required learning outcomes	hours	the week
Oral exams	Practical exercises	1- Model carpentry (3 weeks) 1- The basic principles of model carpentry, definition of	Student understanding of the exercise	8 hours per week	the first

		<p>wood types and their uses, types of models and their carpentry and their uses in plumbing.</p> <p>2- Correcting the model, the conditions that must be met in correcting the model, the shrinkage factor, an exercise on executive drawing of simple models with one separator term and without a box.</p> <p>3- The equipment used, the hand tools and the mechanical equipment used, the</p>			
--	--	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--	--	--

		<p>thickening machine, the tray saw, the band saw, the raking machine, the sanding machine, the converter.</p> <p>4- Practical training for cutting parts according to the operational drawing on the marks.</p>			
Oral exams	Practical exercises	Completing the training, finishing the parts of the model, methods of assembling it, and its final dimensions.	Student understanding of the exercise	8 working hours	the second
Oral exams	Practical exercises	Complex models: explanation of multiple dividing boundaries and internal spaces.	Student understanding of the exercise	8 working hours	the third
2- Metal Plumbing (6 weeks)					
Oral exams	Practical exercises	Metal casting and its importance, the purpose of using castings in industry,	Student understanding of the exercise	8 working hours	the first

		<p>contents of the casting unit, industrial safety precautions in casting, forming a sand mold for a one-piece model in front of students, sand for molds and cores, their types and sources, properties of additives, mixing processes and controlling amounts, use of a sand mixer, sand treatment.</p> <p>Forming sand molds using manual methods for a one-piece model to form a sand mould.</p>			
Oral exams	Practical exercises	<p>Sand mold for a one-piece model with identification of castings and risers, melting metal and pouring it into a mould, extracting and cleaning the castings.</p>	Student understanding of the exercise	8 working hours	the second
Oral exams	Practical exercises	<p>Forming a sand mold as before, melting the</p>	Student understanding	8 working hours	the third

		metal, pouring it into a mold, taking out the casting and cleaning it.	g of the exercise		
Oral exams	Practical exercises	Casting sand molds in a productive manner, training on the use of plumbing plates that contain more than one piece in one mold and with cores, methods of cleaning castings with brushes, files, grinding stones, steel balls, compressed air, rotating machines, reviewing and examining castings, identifying visible defects and their causes, Review the dimensions of the castings, and ensure that they match the required dimensions.	Student understanding of the exercise	8 working hours	the fourth
Oral exams	Practical exercises	Casting sand molds for and	Student understanding of the exercise	8 working hours	Fifth

		compound models with a core. These exercises are among the exercises that the student will perform to complete their operation in other laboratories.			
Oral exams	Practical exercises	Metal smelting furnaces, their types, characteristics, uses, rotary, stirrer, and stationary furnaces.	Student understanding of the exercise	8 working hours	VI
-Refrigeration and maintenance (6 weeks)					
Oral exams	Practical exercises	1- Industrial development and the role of the refrigerator in it. 2- Vernier foot, its types, methods of measuring it, how to make a vernier that reads the height scale with depths,	Student understanding of the exercise	8 working hours	the first

		<p>and the calipers.</p> <p>3- Shankara process</p> <p>Base surfaces, tools used, display materials, impact fork, justice calipers, chink calipers, tailbone and tailbone, right angle, chink flowers, regular and sensitive chinks, altimeter, universal protractor and angle measurement , a practical exercise that combines chinking operations.</p> <p>4- Files and cold process</p> <p>Types of files and their specifications, components and their types, and</p>			
--	--	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--	--	--

		methods of attaching the crafts and their work.			
Oral exams	Practical exercises	Uses of files, how to clean files, the process of filing, practice on the hook and the simple file. Chainsaw cutting Hand saw, saw weapon, installing the saw weapon, conditions that must be met in sawing, training on the saw cutting process.	Student understanding of the exercise	8 working hours	the second
Oral exams	Practical exercises	-Gerification process Types of embryos, age and maintenance of embryos, types of manual hammer heads, method of installing the hammer head, exercise on	Student understanding of the exercise	8 working hours	the third

		<p>the embryo process.</p> <p>2-The process of drilling and glazing</p> <p>Types of drills, types of primers, types of reamers, how to perform the drilling and grinding process, training on manual and mechanical drilling and grinding operations after performing the shredding operations.</p> <p>3-Al-Qalawz</p> <p>Types of screws, internal and external dental tables, training on performing different screwing operations.</p>			
Oral exams	Practical exercises	Various training exercises on the previously mentioned filing work.	Student understanding of the exercise	8 working hours	the fourth

Oral exams	Practical exercises	The importance of maintenance for machines and equipment, clarification of periodic and comprehensive maintenance operations, and how to prepare maintenance reports.	Student understanding of the exercise	8 working hours	Fifth
Oral exams	Practical exercises	1- Types of gaskets and sealants, their uses, methods of installing and removing them, and reviewing their operation 2- Types of valves, methods of operation, inspection and repair	Student understanding of the exercise	8 working hours	VI
-Welding (6 weeks)					
Oral exams	Practical exercises	Occupational safety and security precautions: gas welding, the equipment used and how to install and adjust it, other auxiliary tools and gases used and their specifications, welding wires, their types and measurements, other auxiliary	Student understanding of the exercise	8 working hours	the first

		materials, welding equipment, types of flames and the method of igniting and adjusting the required flame, artifacts, rinsing and cleaning the edges to be welded.			
Oral exams	Practical exercises	Practical exercises: Welding opposite surfaces, perpendicular surfaces, inclined surfaces, circle welding, longitudinal and transverse cutting		8 working hours	the second
Oral exams	Practical exercises	Welding equipment, practical training on using the electric arc to weld various surfaces, equipment used, electrodes and how to install them, practical training.	Student understanding of the exercise	8 working hours	the third
Oral exams	Practical exercises	Gas welding CO ₂ Gas cutting operations, equipment used and precautions that must be available Doing exercises on welding items using gas CO ₂	Student understanding of the exercise	8 working hours	the fourth
Oral exams	Practical exercises	Training in gas-shielded arc welding operations (Tig, mig)	Student understanding of the exercise	8 working hours	Fifth
Oral exams	Practical exercises	Assembly exercises using various	Student understanding of the exercise	8 working hours	VI

		cutting and welding processes.			
5-Plumbing and blacksmithing (3 weeks)					
Oral exams	Practical exercises	Equipment for cutting and bending billets, rolling machine, grooving machine and hand tools, using and bending the billet manually, regular thruster, list and drawing method, simple discretizations, calculating the individual cut and missing actuators.	Student understanding of the exercise	8 working hours	the first
Oral exams	Practical exercises	Training on calculating the individual intersecting works, performing an exercise for two intersecting cylinders.	Student understanding of the exercise	8 working hours	the second
Oral exams	Practical exercises	Singular cones and conic ellipses.	Student understanding of the exercise	8 working hours	the third
-Lathing (6 weeks)					
Oral exams	Practical exercises	The lathe, its specifications, uses, accessories, installation methods, operating the lathe, types of lathe pens using each of them.	Student understanding of the exercise	8 working hours	the first

Oral exams	Practical exercises	Lathing operations: Plane lathe, tool, center work, simple step drill, use of measuring tools.	Student understanding of the exercise	8 working hours	the second
Oral exams	Practical exercises	Mapping the external looting in different ways, explaining the laws for each method, and doing an exercise specifically for the external looting.	Student understanding of the exercise	8 working hours	the third

11. Course evaluation

The evaluation is done on the basis of:

- 1- Attendance at the lecture–Participation or discussion in the lesson
- 2- Tests taken from the lecture
- 3- Providing scientific reports on the subject’s courses, specifically related to the topic of the lecture
- 4- Making small projects

12. Learning and teaching resources

	Required textbooks (methodology, if any)
	Main references (sources)
	Recommended supporting books and references (scientific journals, reports....)
	Electronic references, Internet sites

10. Course structure					
Evaluation method	Learning method	Name of the unit or topic	Required learning outcomes	hours	the week
Discussion, quick quiz, solve problems, Home work	a lecture theoretical+practical	Introduction to mineralogy, crystallization, chimeric crystallization, and the effect of cooling rate on the structure of minerals. Introduction to the metallurgy laboratory (resistance laboratory, heat treatment laboratory, microscopic examination and sample preparation laboratory, imaging laboratory)	The student's understanding of the material	2n+2A	1
Discussion, quick quiz, solve problems, Home work	a lecture theoretical+practical	Installation of metal blocks (solidification of castings) Common defects in castings. Simple tension experiment, elongation curve, stress-strain curve, elastic and plastic formation, modulus of elasticity,	The student's understanding of the material	2n+2A	2

		maximum tensile strength (UTS) relative elongation, decrease in cross-sectional area.			
Discussion, quick quiz, solve problems, Home work	a lecture theoretical + practical	Atomic crowding coefficient, crystallographic directions, crystallographic levels, the phenomenon of rooting. Compression experiment, load curve, elongation, stress-strain curve, length relationship with cross-sectional area, factors affecting the compression experiment.	The student's understanding of the material	2n+ 2A	3
Discussion, quick quiz, solve problems, Homework	Theoretical + practical lecture	Crystal lattice defects, linear raster. Hardness test, Pernel method.	The student's understanding of the material	2n+ 2A	4
Discussion, quick quiz, solve problems, Home work	a lecture theoretical + practical	Flexible forming and plastic forming (slippage, twinning). Hardness test, Vickers method.	The student's understanding of the material	2n+ 2A	5
Discussion, quick quiz, solve	a lecture theoretical + practical	Strain hardening, cold forming, hot	The student's understanding	2n+ 2A	6

problems,Home work		forming. Hardness test, Rockwell method -B-.	ng of the material		
Discussion, quick quiz, solve problems,Home work	a lecturetheoretical+practical	Recovery, recrystallization, crystal growth, hardness test, Rockwell method -C-.	The student's understanding of the material	2n+2A	7
Discussion, quick quiz, solve problems,Home work	a lecturetheoretical+practical	Stress and strain curves in bending, stretching, fracture, types of fracture, movement from ductile to brittle fracture. Fatigue test.	The student's understanding of the material	2n+2A	8
Discussion, quick quiz, solve problems,Home work	a lecturetheoretical+practical	Fatigue, fatigue mechanism, factors affecting the fatigue limit, fatigue-resistant materials. Creep test. Shock test (Izod - Charpy). Preparing samples for microscopic examination (smoothing, polishing, display, examination under a microscope)	The student's understanding of the material	2n+2A	9
Discussion, quick quiz, solve problems,Home work	a lecturetheoretical+practical	Creep, creep mechanism, creep-resistant materials.	The student's understanding	2n+2A	10

			ng of the material		
Discussion, quick quiz, solve problems, Home work	a lecture theoretical+practical	Compound, phase, solid solution, system, equilibrium, alloy formation, mechanical mixture, eutectics.	The student's understanding of the material	2n+ 2A	11
Discussion, quick quiz, solve problems, Home work	a lecture theoretical+practical	Thermal equilibrium diagram for a binary system that is completely dissolved in the liquid and solid states. Thermal equilibrium diagram for a binary system that is completely dissolved in the liquid state and undissolved in the solid state (eutectics).	The student's understanding of the material	2n+ 2A	12
Discussion, quick quiz, solve problems, Home work	a lecture theoretical+practical	Thermal equilibrium diagram for a binary system with complete solvation in	The student's understanding of the material	2n+ 2A	13

		the liquid state and limited solvation in the solid state.			
Discussion, quick quiz, solve problems, Home work	a lecture theoretical + practical	Thermal equilibrium diagram for a binary system that is completely dissolved in the liquid state and forms a chemical compound when frozen.	The student's understanding of the material	2n+ 2A	14
Discussion, quick quiz, solve problems, Home work	a lecture theoretical + practical	Iron, dissolution of carbon in iron, heat equilibrium diagram for the iron/carbon system, the most important reactions included in the diagram.	The student's understanding of the material	2n+ 2A	15
Discussion, quick quiz, solve problems, Home work	a lecture theoretical + practical	Completion of the heat equilibrium diagram for the iron/carbon system.	The student's understanding of the material	2n+ 2A	16

Discussion, quick quiz, solve problems, Home work	a lecture theoretical+practical	Austenite formation, mechanism of converting pearlite to austenite.	The student's understanding of the material	2n+ 2A	17
Discussion, quick quiz, solve problems, Home work	a lecture theoretical+practical	Austenite transformations with constant temperature and transformations by continuous cooling.	The student's understanding of the material	2n+ 2A	18
Discussion, quick quiz, solve problems, Home work	a lecture theoretical+practical	Thermal treatments (annealing, equalization, standardization)	The student's understanding of the material	2n+ 2A	19
Discussion, quick quiz, solve problems, Home work	a lecture theoretical+practical	Completion of thermal coefficients (standardization and revision), sub-zero thermal coefficients, aging.	The student's understanding of the material	2n+ 2A	20
Discussion, quick quiz, solve problems, Home work	a lecture theoretical+practical	Surface hardening (carburization of all types and the thermal treatments that follow it)	The student's understanding of the material	2n+ 2A	21

		Al-Tahwa, Al-Sanida.			
Discussion, quick quiz, solve problems, Home work	a lecturetheoretical+practical	Alloy steel, the effect of alloying elements on the properties of steel.	The student's understanding of the material	2n+ 2A	22
Discussion, quick quiz, solve problems, Home work	a lecturetheoretical+practical	Stainless steel, tool steel.	The student's understanding of the material	2n+ 2A	23
Discussion, quick quiz, solve problems, Home work	a lecturetheoretical+practical	Cast iron production and its heat treatments.	The student's understanding of the material	2n+ 2A	24
Discussion, quick quiz, solve problems, Home work	a lecturetheoretical+practical	Supplementing the production of cast iron and its most important types.	The student's understanding of the material	2n+ 2A	25
Discussion, quick quiz, solve problems, Home work	a lecturetheoretical+practical	Definition of corrosion, direct and indirect economic costs of corrosion, manifestations of corrosion, mechanism of corrosion.	The student's understanding of the material	2n+ 2A	26

Discussion, quick quiz, solve problems, Home work	a lecture theoretical+practical	Passivity, Faraday's law general corrosion, galvanic corrosion, cavernous corrosion.	The student's understanding of the material	2n+2A	27
Discussion, quick quiz, solve problems, Home work	a lecture theoretical+practical	Soil corrosion, facultative corrosion, intercrystalline corrosion, and stress corrosion.	The student's understanding of the material	2n+2A	28
Discussion, quick quiz, solve problems, Home work	a lecture theoretical+practical	Optimal material selection, contour softening, design and operation.	The student's understanding of the material	2n+2A	29
Discussion, quick quiz, solve problems, Home work	a lecture theoretical+practical	Corrosion prevention methods.	The student's understanding of the material	2n+2A	30

11. Course evaluation

The evaluation is done on the basis of:

1. First semester exam (theoretical + practical)
2. Second semester exam (theoretical + practical)
3. Sunnah works (10%), taking into account attendance and participation.
4. Final exam (N+A), first round and second round.

12. Learning and teaching resources

Engineering mechanics

Required textbooks (methodology, if any)

Discussion, conducting a practical exercise to draw types of lines, projections, and segments	Theoretical lecture+practical	General Revision Types of lines, projection, sections, dimensions by using AutoCAD	The student's understanding of the material	3	1
Discuss and explain the types of screws,	practical	Bolts and bolted joints	The student's understandin	3	2+3

with 2 drawings showing the types of screws and nuts		Type of Bolts and Nuts, Assembly Drawing for Bolting System	g of the material		
Discussing and explaining the types of screws, while compiling and drawing a picture showing the types of screws and their uses	practical	Keys and Keyways joints, Types of Keys and their uses, Assembly Drawing for Keys System	The student's understanding of the material	3	4+5
Discuss and explain the types of welding connections with welding symbols. Drawing 2 assembly panels with symbols for a mechanical jack And Brackett	Theoretical lecture+practical	Welding joints and welding symbols Assembly Drawing for Welding System indicated the Welding Symbols	The student's understanding of the material	3	6+7
Discussing and explaining the types of fastening with rivets, while compiling and drawing a	a lecturetheoretical+practical	Rivets and Riveted joints, Types of Rivets and Rivets joints, Assembly Drawing for Rivets System	The student's understanding of the material	3	8+9

picture showing the types of fastening and their uses					
Drawing a board for assembling the mechanical parts of a mechanical crane	practical	Assembly Drawing to Mechanical Screw jack	The student's understanding of the material	3	10
Explaining springs, their types and uses Draw a picture of a compression spring	practical	Springs, Types of Springs and their uses, Assembly Drawing for Compressed Spring	The student's understanding of the material	3	11
Drawing a board to assemble the mechanical parts of an exhaust valve	practical	Assembly drawing for exhaust valve	The student's understanding of the material	3	12
Explanation of column connections and their types (Couplings) with Draw a drawing of a rigid coupling.	practical	types of couplings, Assembly Drawing for Couplings System	The student's understanding of the material	3	13
Explaining clutches, their types and uses Draw in	practical	Clutches, Types of Clutches and their uses,	The student's understanding of the material	3	14

g of a friction clutch.		Assembly Drawing for Clutches System			
Explanation of loading chairs with Drawing an assembly plate for a friction bearing chair.	practical	Bearings, Assembly Drawing for journal Bearing	The student's understanding of the material	3	15
Explaining pulleys and belts, their types and uses Draw a board to assemble parts containing wheels and belts.	practical	Belts and pulleys, Types and their uses Tow Assembly Drawing Sheets to assemble parts contain, pulleys, and different types of belts	The student's understanding of the material	3	16
Explaining gears and their types, straight gears and basic definitions with Drawing a plate for a gear and an assembly plate for a gear.	practical	Types of Gears, Spur Gear definitions, Drawing Spur Gear, and Assembly drawing for Spur Gear box System	The student's understanding of the material	3	17+18
Explanation of bevel gears with Drawing of a bevel gear	practical	bevel gears, Assembly Drawing for Bevel Gear box System	The student's understanding of the material	3	19+20

Explanation of the program with practical application of the program	a lecturetheoretical+practical	Introduction of Autodesk inventor program	The student's understanding of the material	3	21+22
2D drawing	practical	Drawing Two-Dimension Environment	The student's understanding of the material	3	23
Practical exercise	practical	Assembly Environment	The student's understanding of the material	3	24+25
Practical exercise	practical	Dynamics Analysis Environment & Movement	The student's understanding of the material	3	26+27
Practical exercise	practical	Additions on Engineering Drawings	The student's understanding of the material	3	28
A project to draw a moving crow for a lathe.	practical	Special practical project of any process system	The student's understanding of the material	3	29+30
11. Course evaluation					
1 Theoretical tests (semester, final and daily exams)					
2 Practical tests					
Questions during the lecture					
12. Learning and teaching resources

<p>10. Course structure</p>					
Evaluation method	Learning method	Name of the unit or topic	Required learning outcomes	hours	the week
Physical and practical exams	Nazari's lecture	Administration : Management and its development, stages and development of management, basic principles of management, characteristics of management, levels of management.	The student's understanding of the material	2 hours a week	the first

Physical and practical exams	Nazari's lecture	Administration : Administrative functions, industrial management, its functions, industrial engineering, characteristics of industrial management.	The student's understanding of the material	2 hours a week	the second
Physical and practical exams	Nazari's lecture	Industrial unit arrangement: - Location and arrangement of the industrial unit - The main factors affecting the selection of industrial project sites. - Arrangement of the industrial unit (initial arrangement of the factory). - Classification of types of industrial unit arrangements. - Advantages, limitations, and cases in which it is applied	The student's understanding of the material	2 hours a week	the third

		(commodity, functional, mixed, and combined arrangement).			
Physical and practical exams	Nazari's lecture	Feasibility study for industrial projects: An idea about the feasibility study for industrial projects. Industrial project Stages of feasibility studies The importance of feasibility studies.	The student's understanding of the material	2 hours a week	the fourth
Physical and practical exams	Nazari's lecture	Production planning: Production planning, the concept of production planning, objectives of production planning and control.	The student's understanding of the material	2 hours a week	Fifth
Physical and practical exams	Nazari's lecture	Production planning: Types of production, production planning	The student's understanding of the material	2 hours a week	VI

		methods, linear programming methods, graphical method, and transportation method.			
Physical and practical exams	Nazari's lecture	Discussing reports submitted by students with a test.	The student's understanding of the material	2 hours a week	Seventh
Physical and practical exams		Study work and standard time: Work study, work study methods, method study, time study, work measurement.	The student's understanding of the material	2 hours a week	VIII
Physical and practical exams	Nazari's lecture	Maintenance: Maintenance, the importance of maintenance, the concept of the technological system	The student's understanding of the material	2 hours a week	Ninth
Physical and practical exams	Nazari's lecture	Maintenance: Types of maintenance, types of holidays.	The student's understanding of the material	2 hours a week	The tenth
Physical and practical exams	Nazari's lecture	Training: Training, the concept of	The student's understanding of the material	2 hour	eleventh

		training, the importance of training, training methods.		s a week	
Physical and practical exams	Nazari's lecture	Industrial costs and wages: Costs, classification of costs, wages.	The student's understanding of the material	2 hours a week	twelveth
Physical and practical exams	Nazari's lecture	Industrial costs and wages: Methods of calculating wages, incentives, and types of incentives	The student's understanding of the material	2 hours a week	Thirteenth
Physical and practical exams	Nazari's lecture	purchase management: Purchases, purchasing steps, inventory, types of stored materials and methods of controlling them.	The student's understanding of the material	2 hours a week	fourteenth
Physical and practical exams	Nazari's lecture	Industrial safety : Industrial safety, accidents, types of accidents, road	The student's understanding of the material	2 hours a week	.Fifteenth

		accidents, protective equipment and their types.			
Physical and practical exams	Nazari's lecture	Quality control: The meaning of control, the meaning of quality.	The student's understanding of the material	2 hour s a week	sixteen
Physical and practical exams	Nazari's lecture	Quality control: Definition of quality, quality specifications, factors controlling quality, development and improvement of quality, design, conformity quality, international and Iraqi standard specifications.	The student's understanding of the material	2 hour s a week	seventeenth
Physical and practical exams	Nazari's lecture	Quality control methods and sample inspection plans: Quality control methods, examination	The student's understanding of the material	2 hour s a week	eighteen

		and inspection methods, quality control steps, sampling methods, sample inspection schedule.			
Physical and practical exams	Nazari's lecture	Quality control methods and sample inspection plans: Operating characteristic curve, quality of design, data collection (type and analysis).	The student's understanding of the material	2 hours a week	nineteenth
Physical and practical exams	Nazari's lecture	Control charts	The student's understanding of the material	2 hours a week	The twentieth
Physical and practical exams	Nazari's lecture	Control charts: Preparing and using a mean chart. Preparing and using a Pareto chart.	The student's understanding of the material	2 hours a week	21st
Physical and practical exams	Nazari's lecture	Control charts: Prepare a chart with standard deviation	The student's understanding of the material	2 hours a week	twenty tow

		Prepare a defect chart			
Physical and practical exams	Nazari's lecture	Control charts: Scatterplot, how to prepare a scatterplot.	The student's understanding of the material	2 hours a week	twenty third
Physical and practical exams	Nazari's lecture	Vocabulary details	The student's understanding of the material	2 hours a week	twenty fourth
Physical and practical exams	Nazari's lecture	Control charts: Quality control charts for standard deviation and percentage of defective units. Histogram (preparation and use)	The student's understanding of the material	2 hours a week	25th
Physical and practical exams	Nazari's lecture	Types of control charts: Control charts for variables (control chart for arithmetic mean(X-chart).	The student's understanding of the material	2 hours a week	twenty-sixth
Physical and practical exams	Nazari's lecture	Types of control charts: Control charts for variables (control chart for rangesR-Chart and control chart for standard	The student's understanding of the material	2 hours a week	27th

		deviation δ -chart).			
ExamsNadriyaAnd practical	Nazari's lecture	Types of control charts: Control charts for features (Control chart for the percentage of defective unitsP-chart).	The student's understanding of the material	2 hours a week	Twenty-eighth
ExamsNadriyaAnd practical	Nazari's lecture	Types of control charts: Control charts for features (Control chart for the number of defects in one itemC-Chart).	The student's understanding of the material	2 hours a week	XXIX

11. Course evaluation

1. Daily oral and written exams
2. Semester and final exams.
3. Marks for participation, questions, and discussion of theoretical and practical study topics during the lectures.
4. Grades for homework.

Degrees for writing reports and conducting scientific research in the context of scientific subject vocabulary

Name: Khalil Fadel Abdel Khader Email:					
20. Course objectives					
Objective of the course: Acquiring the manual skill to carry out operating and manufacturing operations using various hand tools and measuring tools and the ability to work and operate operating machines in the optimal production method.				Objectives of the subject	
21. Teaching and learning strategies					
5. Explanation and clarification 6. Display models and illustrations 7. Lecture route 8. Use Devices and tools Available in the workshops				The strategy	
22. Course structure					
Evaluation method	Learning method	Name of the unit or topic	Required learning outcomes	hours	the week
Milling workshop 5 weeks					
Oral exams	Practical exercises	1- Milling (5 weeks) 1- Horizontal milling machine, main unit. Explaining the parts of the machine and the function of each one, operating the machines and choosing speeds and feeds, tools and devices attached to the machines and their uses and methods of installing them, dividing heads, slots, rotary	Student understanding of the exercise	8 hours per week	the first

		<p>trays, universal milling heads, rack work heads, sewer work heads.</p> <p>2- Milling balls:</p> <p>Types (cylindrical surface milling, shoulder milling, sewage work blocks, gear sharpening machines, special cylindrical forming machines with internal or peripheral holes)</p> <p>Uses of cables, methods of installing them, and installing artifacts</p> <p>3- Milling flat surfaces:</p> <p>Choosing and installing the appropriate cutter, adjusting the cutting and feeding speeds, how to install the workpieces, the sequence of operating operations, parts of the milling operations to prepare flat, inclined and opposite surfaces and create a group of different ducts.</p>			
Oral exams	Practical exercises	<p>1- Splitting heads and their uses:</p> <p>The dividing device and how to use it, simple dividing, dividing using circles of holes, differential dividing, dividing corners, doing exercises on different types of dividing (dividing parts, dividing corners).</p>	Student understanding of the exercise	8 working hours	the second

		2- Milling straight gears on general machines and gear racks, rules for cutting gears, used chains, service equipment, and preparing processing and operating processes, parts for milling operations, reviewing the final dimensions, training on milling a gear arch and gear rack.			
Oral exams	Practical exercises	1- Milling bevel gears on general machines: (The same method for milling straight gears) 2- Milling helical gears and inclined racks on general machines: (The same method for milling straight gears)	Student understanding of the exercise	8 working hours	the third
Oral exams	Practical exercises	1- Milling crafts by dividing the corners 2- Milling of internal sewers. 3- Milling curves, explaining the general laws of each process, steps to implement it, preparing raw materials, choosing diameters, choosing operating rates,		8 working hours	the fourth

		performing milling operations, reviewing the dimensions of the artifacts.			
Oral exams	Practical exercises	<p>Milling machine maintenance:</p> <ol style="list-style-type: none"> 1- Dismantling and installing the mandrel shaft. 2- Opening, maintaining and installing the machine table. 3- Open the speed box for the main parts and learn how to change the speeds and reinstall them. 4- Open the feed speed box and learn how to change it and reinstall it. 5- Performing speed-changing operations using belts and pulleys and learning how to convert them and the process of tightening them. 6- Identify the electrical control circuits for operating the milling machine. 		8 working hours	Fifth
2- - Grinding (5 weeks)					

<p>Ora l exa ms</p>	<p>Practica l exerc ises</p>	<p>2Grinding machines: (Internal and external cylindrical, eccentric grinding, surface grinding, tool sharpening) 1- Grinding stones: Their shapes, types, specifications, use of each, preparing grinding stones for operation (adjusting balance, leveling stones). 2- Surface grinding machines: Explaining the parts of the machine and the function of each, the method of operation and adjusting the travel, the speed of feeding and feeding, methods of installing the workpieces, the use of cooling fluids and its types. 3- Training on grinding flat, parallel, perpendicular and inclined surfaces. 4- Drain grinding: Training on grinding different drains and round drains.</p>	<p>Student understanding of the exercise</p>	<p>8 worki ng hours</p>	<p>the first</p>
<p>Ora l exa ms</p>	<p>Practica l exerc ises</p>	<p>1-Cylinder grinding: Parts of the machine, how to operate it, adjusting operating speeds and rates, testing the appropriate stone for the workpiece, installing the artifacts, using cooling fluids and measuring tools.</p>	<p>Student understanding of the exercise</p>	<p>8 worki ng hours</p>	<p>the seco nd</p>

		2- Exercises on external and internal cylindrical grinding operations.			
Oral exams	Practical exercises	1-Eccentric grinding and grinding of cranks. 2-Various grinding operations using previous grinding operations and training on them.	Student understanding of the exercise	8 working hours	the third
Oral exams	Practical exercises	Number sharpening machine: 1- Operating tool sharpening machines, how to deal with them, and choosing the appropriate machine for sharpening the specific tool. 2- How to install the cutting tool on the machine and determine the required angles for the cutting edge. 3- Performing sharpening operations on models of a number of pieces (single-edged cutting tool, double-edged cutter, multi-edged cutting tool.	Student understanding of the exercise	8 working hours	the fourth
Oral exams	Practical exercises	Maintenance of grinding machines (general internal and external cylindrical grinding machines) 1- How to replace the coolant and determine the required level.	Student understanding of the exercise	8 working hours	Fifth

		<p>2- Determine the lubrication locations for the machine and the appropriate type of oil and grease.</p> <p>3- Performing the process of replacing the belts that transmit rotary speeds for stone and workpieces.</p>			
- 3-Scraping (5 weeks).					
Ora l exa ms	Practica l exerc ises	<p>1- Flat and vertical planers: The difference between using each of them, the parts of the machine and the method of work, the objects and surfaces that can be operated on each of them, the pens used, the methods for installing them, the speeds of cutting and feeding, the inoculation rates, and the selection of each of them.</p> <p>2- Exercises for scraping straight and inclined surfaces at different angles.</p> <p>3- Exercises to make internal and external drains of various shapes.</p>	Student understanding of the exercise	8 working hours	the first
Ora l exa ms	Practica l exerc ises	Exercises for scraping entire surfaces and artifacts, including parts of machines.V Block, Drill Bases.	Student understanding of the exercise	8 working hours	the second

Ora l exa ms	Practica l exerc ises	Exercises on scraping arcs, making sewers on circular works using dividing devices on planers.	Student understandin g of the exercise	8 worki ng hours	the third
Ora l exa ms	Practica l exerc ises	Various scraping exercises.	Student understandin g of the exercise	8 worki ng hours	the four th
Ora l exa ms	Practica l exerc ises	Maintenance of skimmer machine: 1- Maintenance of the cart scraping machine. 2- Opening the crocodile and maintenance parts for the control parts along the stroke, as well as changing the location of the stroke. 3- Parts of various lubrication and lubricating operations and opening the oil pump.	Student understandin g of the exercise	8 worki ng hours	Fifth
4-Lathing (5 weeks)					
Ora l exa ms	Practica l exerc ises	1- Eccentric turning and turning using a quadrilateral eyelet and methods of installing special workpieces. 2-Exercises on various eccentric objects..	Student understandin g of the exercise	8 worki ng hours	the first
Ora l exa ms	Practica l exerc ises	1- External and internal rotation lathe and formation lathe. 2-Exercises for various lathe operations using modeling pens.		8 worki ng hours	the seco nd
Ora l	Practica l	Turret lathes:	Student understandin	8 worki ng hours	the third

exams	exercises	<p>1- A general idea about turret lathes and the use of speed and feed tables.</p> <p>2- Follow up on the operations of various products and prepare the sequence of their operations.</p>	g of the exercise		
Oral exams	Practical exercises	<p>1- The pens and tools used, the method of adjusting them, and preparation for making various crafts.</p> <p>2-How to prepare maps that follow operations.</p>	Student understanding of the exercise	8 working hours	the fourth
Oral exams	Practical exercises	Vocabulary details	Student understanding of the exercise	8 working hours	Fifth
5- Machines programmed using G-Code					
Oral exams	Practical exercises	<p>1- A historical overview of the machines CNC, differences between regular machines and CNC machines, stages of work on programmed machines.</p> <p>2- Defining the parts of the machine, the movement axes, the control panel, and defining and operating the machine in practice.</p>	Student understanding of the exercise	8 working hours	the first
Oral exams	Practical exercises	<p>1- Program, program structure, how to program milling machines, functions used in programmed machines, zero point of the machine,</p>	Student understanding of the exercise	8 working hours	the second

		<p>functions of movement levels.</p> <p>(G17, G18, G19) Motion coordinate functions (G90, G91).</p> <p>2- Simulation work(Simulation) using simulation programs, how to use the program, program instructions.</p> <p>3- Control panel of the machineCNC according to the ISO9001 system, executing movements via a manual control device, zeroing the machine, zeroing the triangular machine, zeroing the workpiece, and methods for installing the workpiece.</p>			
Oral exams	Practical exercises	<p>1- Linear motion functions(G1,G2), functions to store segment zero points (reference points)</p> <p>(G1,G2,G3,G4,G5,G6,G7,G8,G9,G10,G11,G12,G13,G14,G15,G16,G17,G18,G19,G20,G21,G22,G23,G24,G25,G26,G27,G28,G29,G30,G31,G32,G33,G34,G35,G36,G37,G38,G39,G40,G41,G42,G43,G44,G45,G46,G47,G48,G49,G50,G51,G52,G53,G54,G55,G56,G57,G58,G59), auxiliary functions F,M,S,T</p> <p>2- Implement a face milling program using the instructions above and apply it to the calculator using simulation programs</p>	Student understanding of the exercise	8 working hours	the third

		<p>and implement it practically on the machine.</p> <p>3- Rotary motion functions G2, G3, repetition function, mirror image formation function.</p>			
Ora l exa ms	Practica l exerc ises	<p>1- Create a program to implement circular cuts (quarter circle, semicircle, full circle) and apply it on the calculator using simulation programs and implement it practically on the machine.</p> <p>2- Radius compensation functions (calibration functions) G40, G41, G42, G43, G44</p> <p>3- Create a program to implement two exercises, one of which is relief and the other is drilling, and apply it on the calculator using simulation programs and implement it on the machine using the above functions.</p>	Student understanding of the exercise	8 working hours	the fourth
Ora l exa ms	Practica l exerc ises	<p>1- Fixed functions, single-stage drilling function, two-stage drilling function, tooth operating function,</p>	Student understanding of the exercise	8 working hours	Fifth

		<p>hole expansion function, sifting ring function, longitudinal slit operating function, circular drilling operating function.</p> <p>2- Implementing a program using the previous functions and applying it on a calculator using simulation programs and executing it on a machine.</p> <p>3- Maintenance of the machine, how to replace the parts, check the lubrication system in the machine and lubricate the rotating shaft, check the cooling system and replace the coolant.</p>			
6-Vocabularies for the workshop of programmed machines that operate with a systemCAD-CAM					
Oral exams	Practical exercises	<p>1- Introducing students to programmed machines, their accessories, and accompanying programs.</p> <p>2- Identify the parts of the programmed lathe machine. Control panel keys and their respective functions, number of pieces, machine axes.</p>	Student understanding of the exercise	8 working hours	the first

		3-Use a programCAD-CAM to design an engineering product and implement the product on the calculator using a simulation method.			
Ora l exa ms	Practica l exerc ises	Learn how to replace a damaged kit or define a new kit. Implementing an integrated product on the machine starting from the design stage using the programCAD/CAM, through the simulation process, and ending with implementing the product on the machine.	Student understanding of the exercise	8 working hours	the second
Ora l exa ms	Practica l exerc ises	1- Identify the parts of the programmed milling machine: the control panel keys and the function of each, the number of pieces, and the machine axes. 2- Use a programCAD/CAM to design an engineering product and implement the product on a calculator using a simulation method.	Student understanding of the exercise	8 working hours	the third
Ora l exa ms	Practica l exerc ises	1- Learn how to replace a damaged number or define a new number. 2- Implementing an integrated product on the machine, starting from the design stage on the	Student understanding of the exercise	8 working hours	the fourth

		programCAD/CAM, passing through the simulation process and ending with implementing the product on the machine.			
Oral exams	Practical exercises	Carrying out many exercises on lathe and milling machines.	Student understanding of the exercise	8 working hours	Fifth
23. Course evaluation					
<p>The evaluation is done on the basis of:</p> <ul style="list-style-type: none"> 5- Attendance at the lecture–Participation or discussion in the lesson 6- Tests taken from the lecture 7- Providing scientific reports on the subject’s courses, specifically related to the topic of the lecture 8- Making small projects 					
24. Learning and teaching resources					
	Required textbooks (methodology, if any)				
	Main references (sources)				
	Recommended supporting books and references (scientific journals, reports....)				
	Electronic references, Internet sites
